

# Flinders Travertine Irregular Walling

A warm beige travertine wall that has been split and tumbled would have a unique texture and appearance that adds visual interest and character to any space.

The split surface of the travertine wall would showcase the natural variations in the stone, including its grains, veins, and other unique features. The split surface would also give the wall a rustic, earthy look, as if the stone had been harvested directly from nature.

The tumbled edges of the travertine wall would soften the overall appearance of the wall, creating a more organic and natural feel. The tumbled edges would also provide a gentle, undulating contour to the wall, creating subtle shadows and highlights that would further enhance the wall's visual appeal. The warm beige color of the travertine would be rich and inviting, providing a welcoming and comfortable ambiance to any room or outdoor space. Overall, a warm beige travertine wall that has been split and tumbled would be a beautiful and natural addition to any design scheme.

---

### Sealing & Cleaning

Tumbled recommends Sealing all Natural Stone

For more information on caring for your natural stone please refer to our website [www.tumbled.com.au](http://www.tumbled.com.au)

---

### Please note

If you are installing your stone without a grout joint we recommend an extra 15-20% for wastage. This then allows the stonemason to cut and shape the stone to ensure the joints are butt-jointed. We also recommend the installer unpacks each crate of stone and use the mix of the sizes supplied. Tumbled will not exchange smaller pieces for larger pieces, it is the installers responsibility to use all the sizes supplied.
